Please add new claims 45-55 as follows:

- --45. The monoclonal antibody according to claim 23, which enables the immunoaffinity purification of said protein to give a purity of at least 95% with a yield of nearly 100%.
- --46. The monoclonal antibody according to claim 23, wherein said monoclonal antibody is produced by a hybridoma resulting from the fusion of an infinitely proliferating cell and an antibody-producing cell isolated from a mammal immunized with the protein.
- --47. A method for detecting a protein by immunoreaction, comprising the steps of:

contacting the monoclonal antibody of claim 23 with a test sample to effect immunoreaction in the presence of a protein in the test sample to which the monoclonal antibody is specific, wherein the protein has a molecular weight of 19 \pm 5 kDa as determined by gel filtration or non-reducing SDS-PAGE and a pI of 4.8 \pm 1.0 as determined by chromatofocusing, comprises the amino acid sequences set forth as residues 26-43 and 79-103 of SEQ ID NO:2, and is capable of inducing IFN- γ production by immunocompetent cells; and

detecting the protein by immunoreaction with the monoclonal antibody.

--48. A purified protein which has the amino acid sequence of SEQ ID NO:2 where an represents methionine or threonine.

--49. A monoclonar antibody specific to the protein of

- --50. The monoclonal antibody according to claim 49, which belongs to the class of IgG or IgM.
- --51. A hybridoma capable of producing the monoclonal antibody of claim 49.
- --52. A method for detecting a protein by immunoreaction, comprising the steps of:

contacting the monoclonal antibody of claim 49 with a test sample to effect immunoreaction in the presence of a protein in the test sample to which the monoclonal antibody is specific, wherein said protein has a molecular weight of 19 \pm 5 kDa as determined by gel filtration or non-reducing SDS-PAGE and a pI of 4.8 \pm 1.0 as determined by chromatofocusing, comprises the amino acid sequences set forth as residues 26-43 and 79-103 of SEQ ID NO:2, and is capable of inducing IFN- γ production by immunocompetent cells; and

detecting the protein by immunoreaction with the monoclonal antibody.

- --53. An IFN- γ production inducing agent which contains, as an effective ingredient, the protein of claim 48.
- --54. A therapeutic agent comprising a pharmaceutically-acceptable carrier and, as an effective ingredient, the protein of claim 48.
- --55. A purified protein obtainable from mouse liver, which has a molecular weight of 19 \pm 5 kDa as determined by gel filtration or non-reducing SDS-PAGE and a pI of 4.8 \pm 1.0 as determined by chromatofocusing, has a homologous amino acid sequence to the amino acid sequence of SEQ ID NO:2 where Xaa
